Step 1 — SSD

- Unscrew both 8mm phillip's head screws that hold on the access gate.

Step 2

- Use either the your finger, the screw driver, or a spudger to pop out the gate.

Step 3

- From here, you can access the hardrive, motherboard, SSD, and RAM.

Step 4
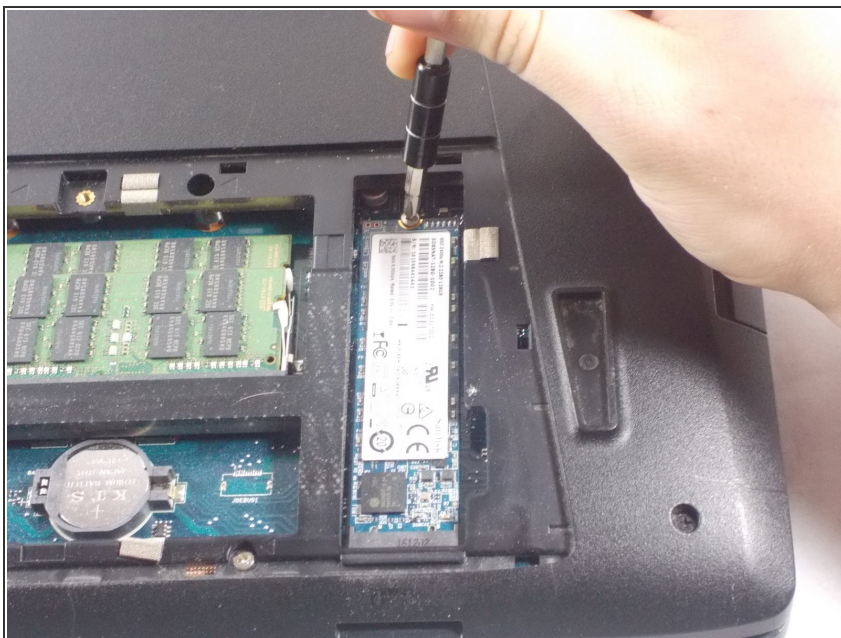

- Remove the 4mm screw holding in the SSD.

- ⓘ Note that the screw is holding it down so it will pop up once the screw is removed.

Step 5

- Remove SSD from slot.

To reassemble your device, follow these instructions in reverse order.
