INTRODUCTION

With this replacement guide you will learn how to replace the screen as well as the digitizer for an HP Pavilion 14-v062us.
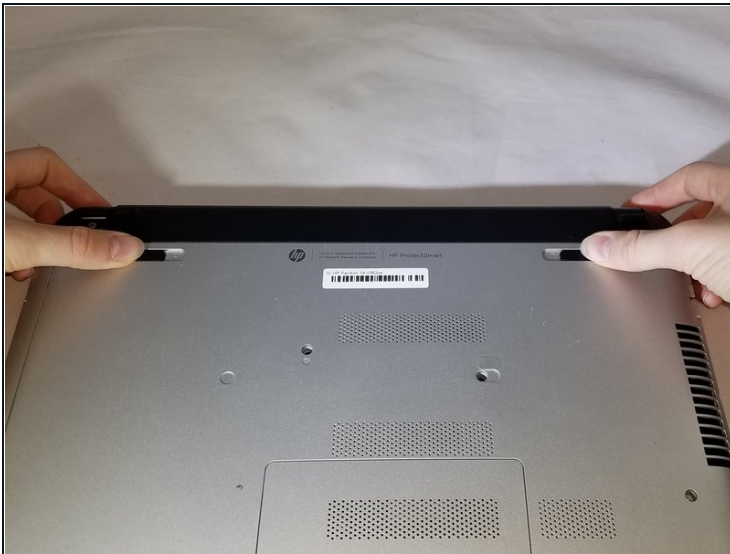

🔧 TOOLS:

[Phillips #1 Screwdriver](#) (1)
[Metal Spudger](#) (1)
[iFixit Opening Tool](#) (1)
[Spudger](#) (1)

Step 1 — Battery

ⓘ Power laptop off and make sure it is not plugged into charger

● Push inward towards the center of laptop (it may take a lot of pressure). Battery should release once buttons are completely pushed in
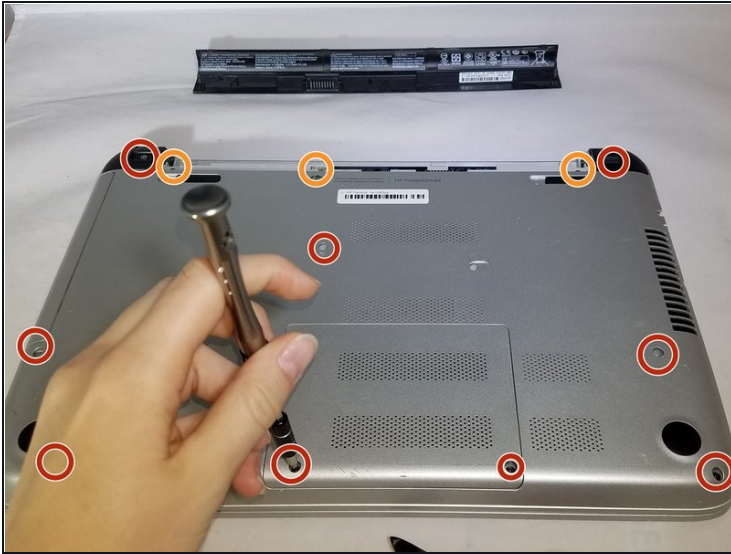

Step 2

- Lift the battery upwards and out from the laptop

Step 3 — Keyboard

- Remove rectangular rubber tops with a spudger

- Remove the two 4.60 mm PH#1 screws located under rectangular rubber tops.

- Remove plastic edge covering with the blue plastic opening tool.

- Remove two 4.63 mm PH#1 screws located under plastic edge covering.
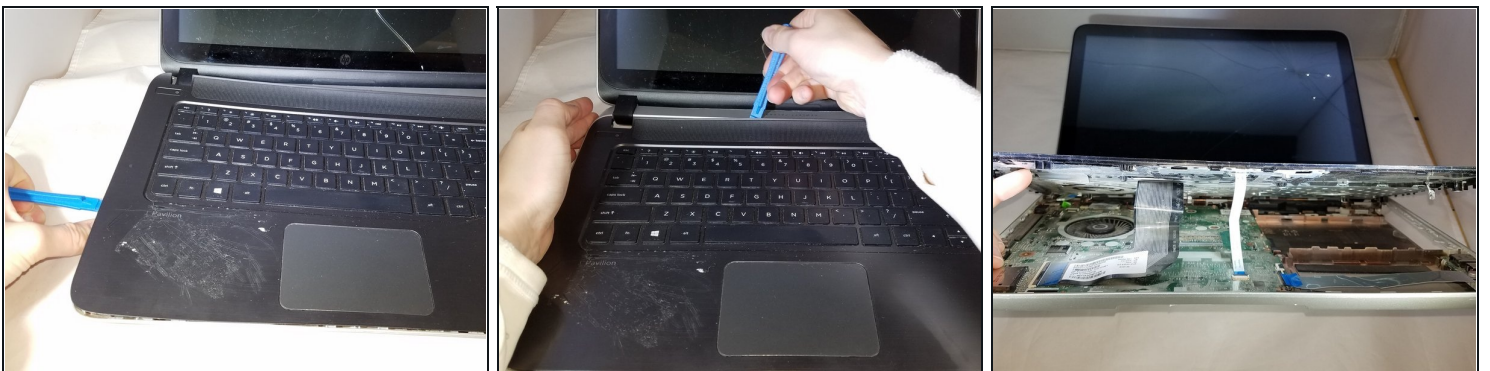

Step 4

- Use Phillips screwdriver #1

- Remove all nine 7.09 mm PH#1 screw black screws including small rectangular cover.

- Remove the three 7.14 mm PH#1 screws.

- Remove the one 7.09 mm PH#1 screw that will be underneath the small rectangular cover
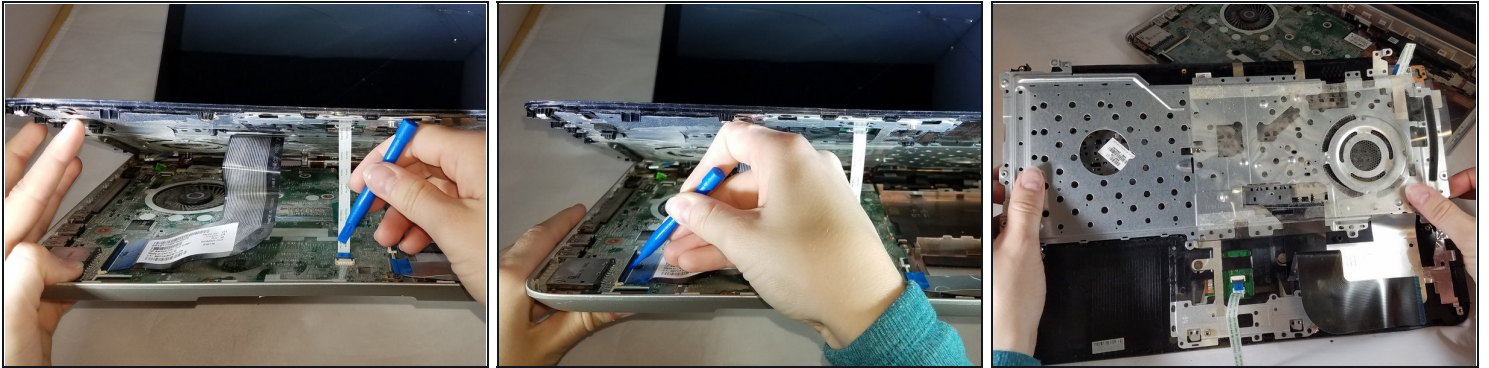

Step 5

- Remove disc tray

- Locate screw within computer that is inside of where the disc tray was

- Using a Phillips #1 screwdriver, unscrew the screw

- Set laptop down and open laptop so the keyboard is facing you
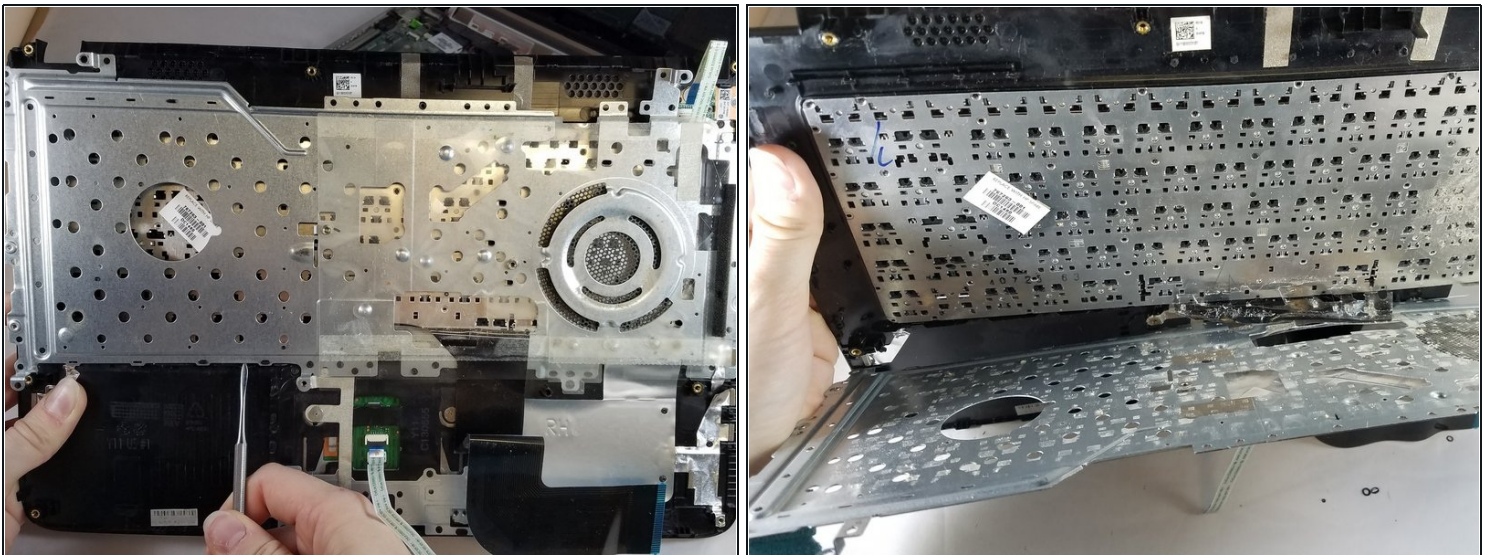

Step 6

- Using a spudger or plastic opening tool, pry along siding of keyboard, where it connects to the rest of the laptop

- Pry until you are able to lift entire face and keyboard

- Only cables should be connecting it underneath
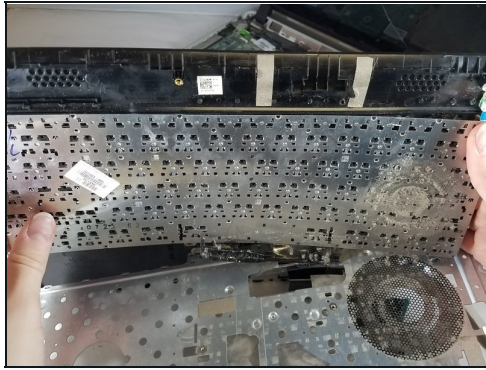

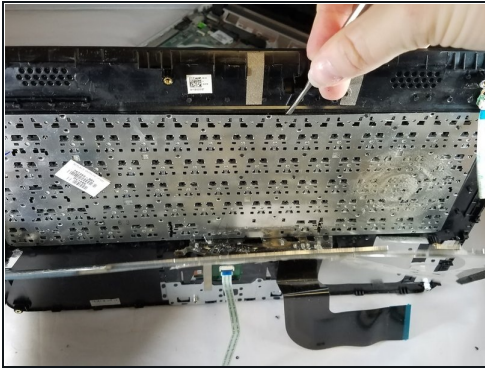

Step 7

- Disconnect/ unplug cables using plastic opening tool.

- Separate the keyboard panel from the laptop with your hands.

- Turn around the laptop and lay it flat.

Step 8

- Use a spudger to pry around the first layer of the silver panel until you are able to remove it

- ⓘ Only use a metal spudger as a last resort

Step 9

- Using a spudger tool, start prying around the second layer of the silver panel until you are able to remove it

ⓘ Only use a metal spudger as a last resort

Step 10 — Screen

- Using the spudger, wedge tool in between screen and laptop

ⓘ Only use a metal spudger as a last resort. A regular black nylon spudger or a plastic opening tool should be used whenever possible

- Pry open screen with spudger and your hands

Step 11

- Remove the four 2.86 mm JIS#0 screws from each corner of the silver frame that is holding the digitizer.
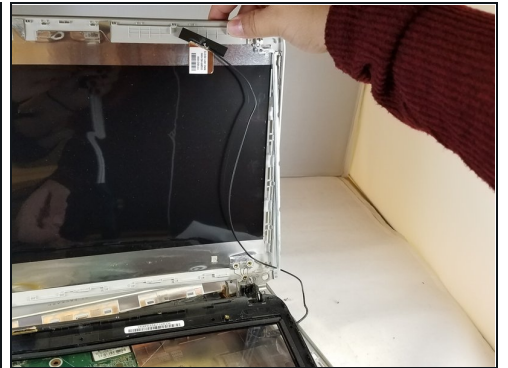

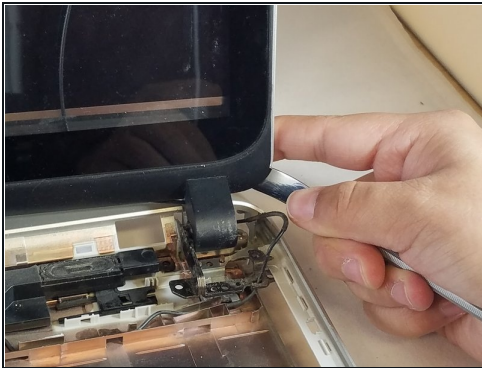

Step 12

- Locate the white and brown wiring that connects to the digitizer and the screen.

- Cut through the clear part of tape attached to the brown latch and white wiring.

- Disconnect the wiring, by lifting the brown latch with the blue plastic opening tool and pulling the white wire at the same time.

- Lift off the digitizer. If you need to replace the digitizer stop here and replace this part.

- If you need to replace the screen, then continue

Step 13

- Remove the four 5.66 mm PH#0 from under the keyboard near the hinges.

Step 14

- Wedge spudger in between screen and back of computer

- ⓘ Only use a metal spudger as a last resort. A regular black nylon spudger or a plastic opening tool should be used whenever possible

- Detach screen

To reassemble your device, follow these instructions in reverse order.
