Step 1 — Battery

- Apply slight pressure and slide the button above the battery cabinet to the right to open.

- Remove battery cabinet cover by sliding away from the center of device.

- (i) This device requires 4AA batteries to function without the AC adaptor.
Step 2 — Back Panel

- Remove all nine plastic caps from the back of the device using the plastic opening tool.

- ⚠ These covers are made of hard plastic so they may be difficult to remove.

Step 3

- Remove the hard rubber tab located by the cartridge slot using the plastic opening tool.

⚠ Be careful not to apply excessive force.

- Once the rubber tab is removed unscrew the single 7 mm screw using a J0 screwdriver.

Step 4

- Remove all ten 7mm screws from the back panel of the device using a JO bit screwdriver.

⚠ Do not use excessive force while removing the screws to prevent damaging the plastic case.

Step 5

- Using the plastic opening tool, detach the back plate from the front piece.

⚠ Do not use excessive force. If the back plate does not gently come on double check that all screws were removed.

ⓘ Once the back panel is removed, you will be able to see the motherboard and other components within the device.

To reassemble your device, follow these instructions in reverse order.
