INTRODUCTION

This guide will give you step-by-step instructions on how to remove your battery. Make sure you have a clean, dry, uncluttered, and roomy work space that has good lighting before you start. Also, make sure that your battery actually needs to be replaced by consulting our troubleshooting guide.
TOOLS:

- Anti-Static Wrist Strap (1)
- Phillips #00 Screwdriver (1)
- Magnetic Project Mat (1)
- T5 Torx Screwdriver (1)

PARTS:

- HP Spectre x360 13 Replacement Battery (1)

Step 1 — Battery

ⓘ Before you begin, be sure to turn off your laptop and discharge the battery down to 25%.

● Turn the computer upside down.

● Use the T5 Torx Screwdriver to remove the eight 3.3 mm screws.

ⓘ Make sure to use the [magnetic project mat](#) to help you keep track of the small screws.

Step 2

- Use an opening tool to pry up and loosen the back case from the laptop.

  ⚠ If the back case doesn't loosen easily, there may be screws hidden underneath the rubber feet. Carefully pry a foot up and remove any hidden screws.

- Remove the back case.

Step 3

- Remove the four 2mm Phillips #00 screws securing the battery.

- The screw locations are marked by small white arrows on the battery.

Step 4

- Peel off the adhesive on the left side of the battery holding the speaker wire down.

- Move the battery slightly to gain access to the battery plug, located on the left edge of the battery.

- Carefully unplug the battery by pulling the connector towards the battery.
  ⚠ Pull parallel to the battery, not straight up.

- Remove the battery.
  ⓘ It is normal for your battery to flex and bend a bit where the wider section meets the narrower section.

To reassemble your device, follow these instructions in reverse order.

For optimal performance, after completing this guide, calibrate your newly installed battery.

Take your e-waste to an R2 or e-Stewards certified recycler.
