# INTRODUCTION

This repair guide will show the reader how to fix the Scroll Wheel on a VicTsing wireless mouse.

---

## TOOLS:

- [Phillips #000 Screwdriver](#) (1)
  - [Metal Spudger](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — VicTsing Mouse Scroll Wheel Repair

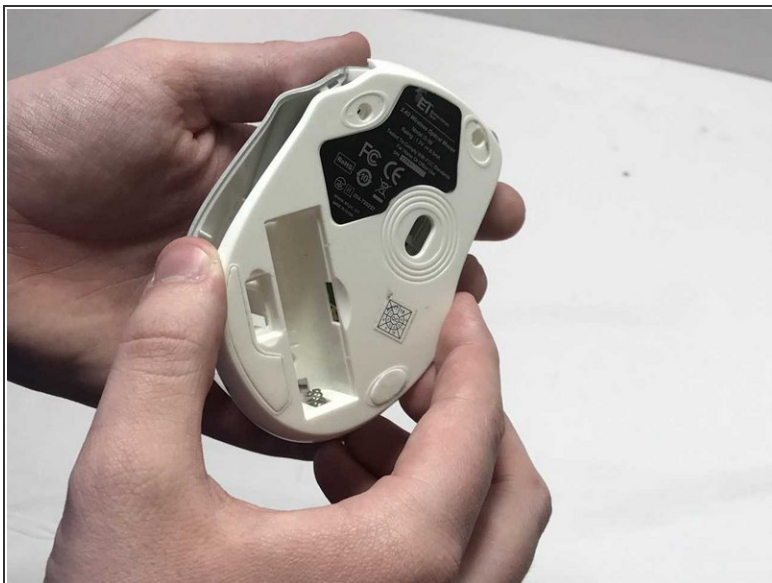

- Remove the battery cover, and batteries from the compartment. Then use the metal spudger to peel back the adhesives.

## Step 2

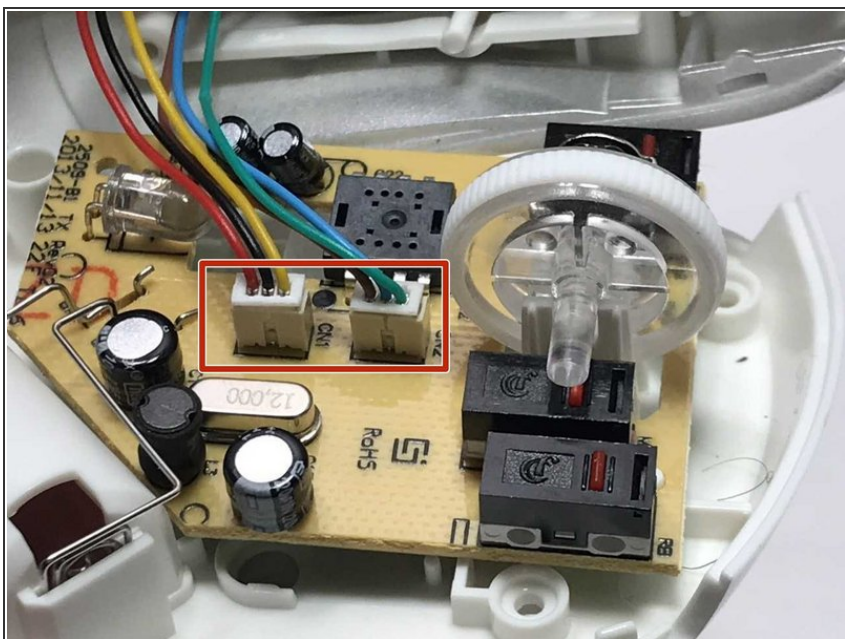

- Use a Phillips #000 screwdriver to remove the 3 screws.

## Step 3

- Carefully pull the base and upper casing away from each other.

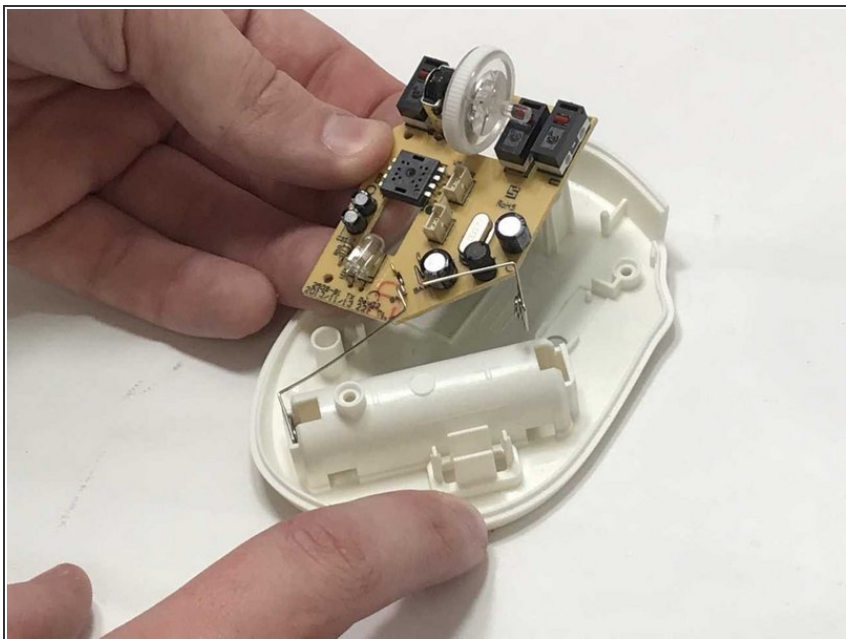

## Step 4

- Remove the two connected wire ports so that you can separate the top casing from the base .
- ⓘ This might take some effort, use the spudger if needed.

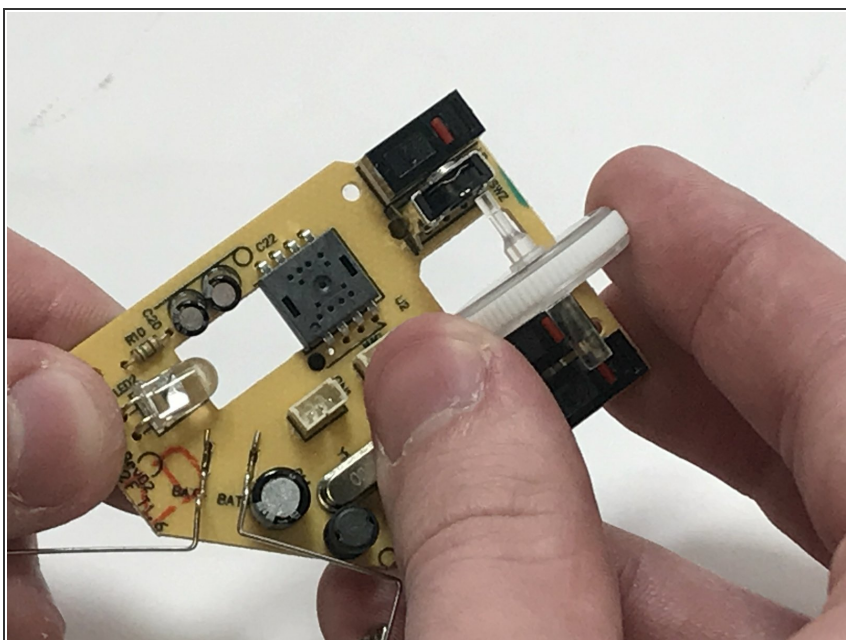

## Step 5

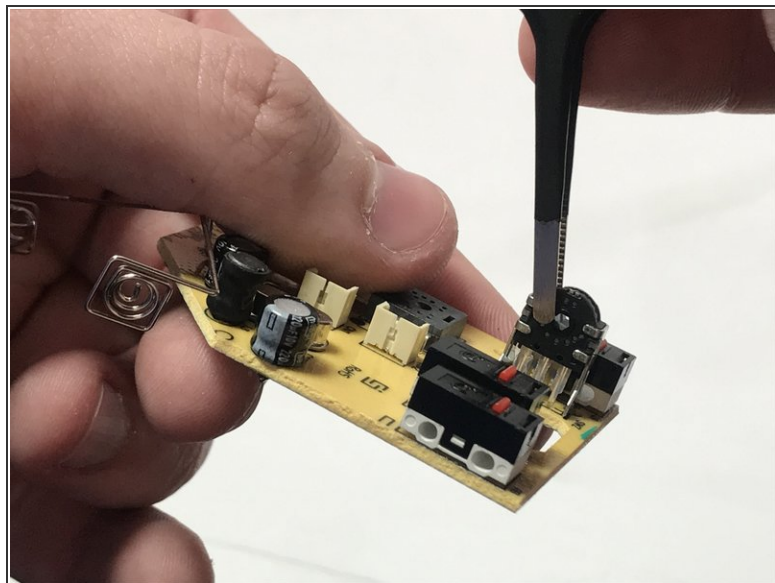

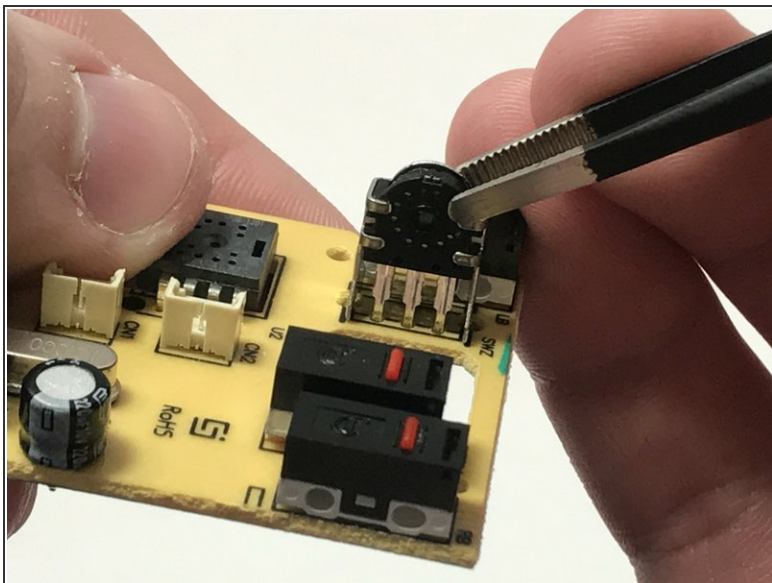

- Remove the circuit board from the plastic base of the mouse.

## Step 6

- Move the wheel away from the rotary encoder, and lift it to remove it.

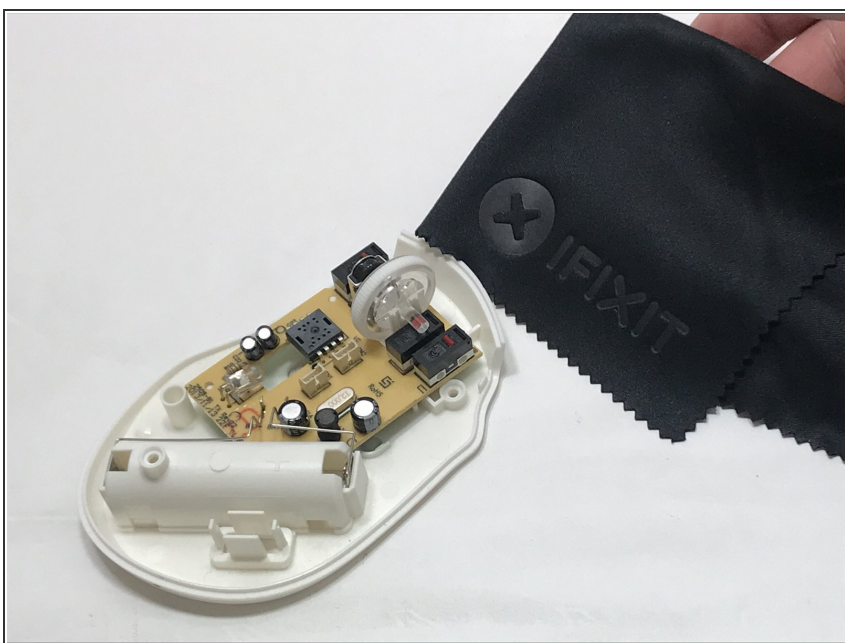

## Step 7

- Use tweezers to squeeze the rotary encoder. Do this in multiple spots.

⚠ Do not apply too much pressure to the rotary encoder or it will break.

## Step 8

- Clean any dust or debris you see in the casing.

To reassemble your device, follow these instructions in reverse order.
