Step 1 — Battery

- Find the battery removal slider.

- Slide it across while simultaneously popping out and removing the device's battery.
Step 2 — Hard Drive

- Remove the five marked screws found under the battery using a philips head screwdriver.

Step 3

- Remove the small panel on the back by prying it off. This should reveal the hard drive.

Step 4

- ⓘ The hard drive is connected to the motherboard via this blue-tabbed cable, highlighted in red.

- Gently pry off the cover to release the cable.

- Slowly lift the hard drive out and away from the device.

Step 5 — RAM

- Remove the highlighted screws

- Pry off the lower two grip pads

  - 📌 You may need to use more force than feels necessary

- Remove the two additional screws underneath the lower grip pads

- Remove the large back panel to reveal the inner workings

  - ⓘ The back panel might be difficult to remove. Use a flat object to help pry it off, and don't be afraid to use force.

Step 6

- Pull back the black rectangular cover to reveal the RAM

- Unclip the metal restraints on the side to pop out the RAM

- Repeat the previous step for the second RAM below
