Step 1 — Remove cover

- Start by removing the 8 screws circled in red in the photo with the Philips # 0 screwdriver.

- Then, using the iFixit Opening Picks, lift up from the dock connector end. Unclip it gently.

Step 2 — RAM replacement

- After removing the cover, locate the slots for RAM in the computer. There are 2 of them.

⚠ Attention, only the DDR4 memory in portable format is compatible with the motherboard of this PC!

To reassemble your device, follow the instructions in reverse order.
