## INTRODUCTION

This guide will show you how to replace the LED lights for the Tt Esports Poseidon keyboard.

---

### TOOLS:

- [JIS #1](#) (1)
  - [iFixit Opening Tools](#) (1)
-

## Step 1 — Panel

- Flip the keyboard over.

## Step 2

- Remove the three JIS #1 screws from the back cover.

### Step 3

- Pry at these points with a plastic opening tool to unclip the two halves of the keyboard case.

### Step 4

- Pull apart the two parts of the panel to expose the motherboard and keys.

## Step 5 — Keys

- Use a plastic opening tool to pry off every key.

## Step 6

- The space, +, enter, shift, insert, and backspace keys all have metal parts which might make it a little harder to remove.
- ⓘ Pull these keys to the side and up.

## Step 7 — Led Lights

- Since the LED lights are connected to every key, you will need to replace this whole part.

To reassemble your device, follow these instructions in reverse order.
