

# HP 15-R263DX Hard Drive Replacement

This guide shows the process for replacing the hard drive in the case that the computer will not boot upon start-up.

Written By: Drake Hort

## INTRODUCTION

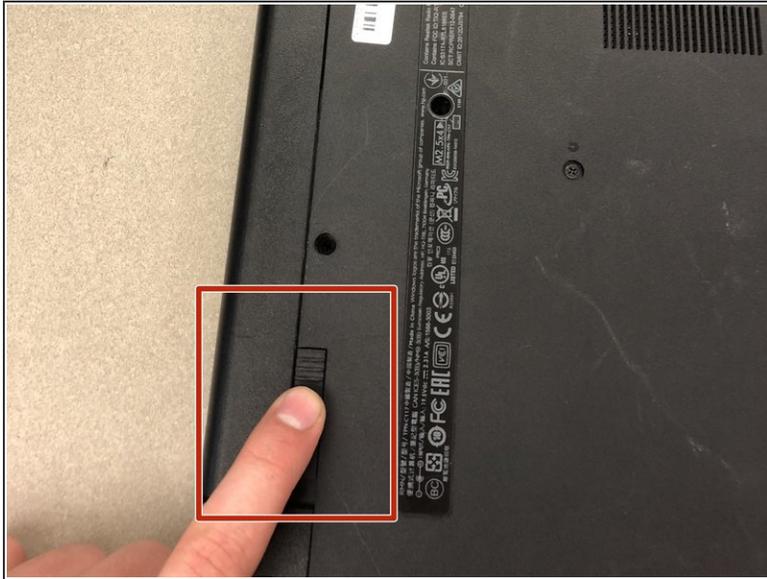

If the computer will not boot upon start-up but shows BIOS dialog, the component in suspect is the hard drive. In this case, the hard drive is faulty or broken and needs replacement.

### TOOLS:

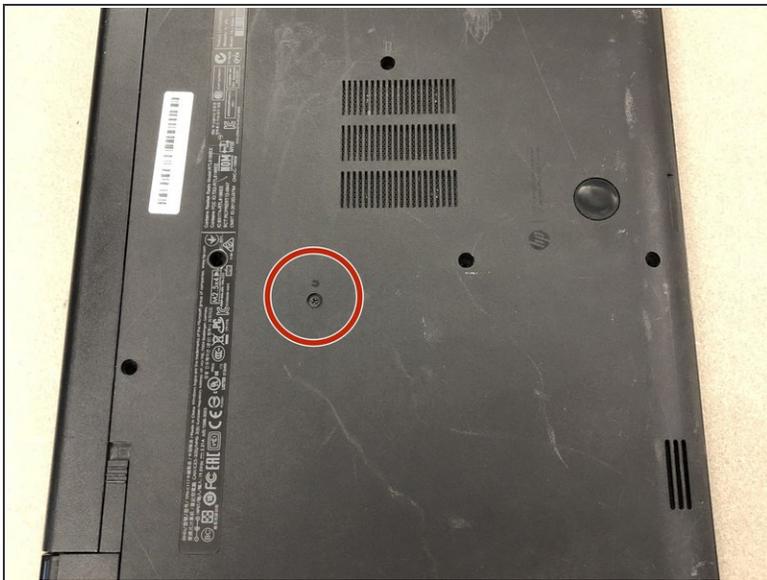

- [Phillips #1 Screwdriver](#) (1)
  - [Metal Spudger](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Battery

- Eject the battery from the computer by sliding the two clips on the bottom of the computer toward the center of the computer.
- Slide the battery out as shown in the picture.

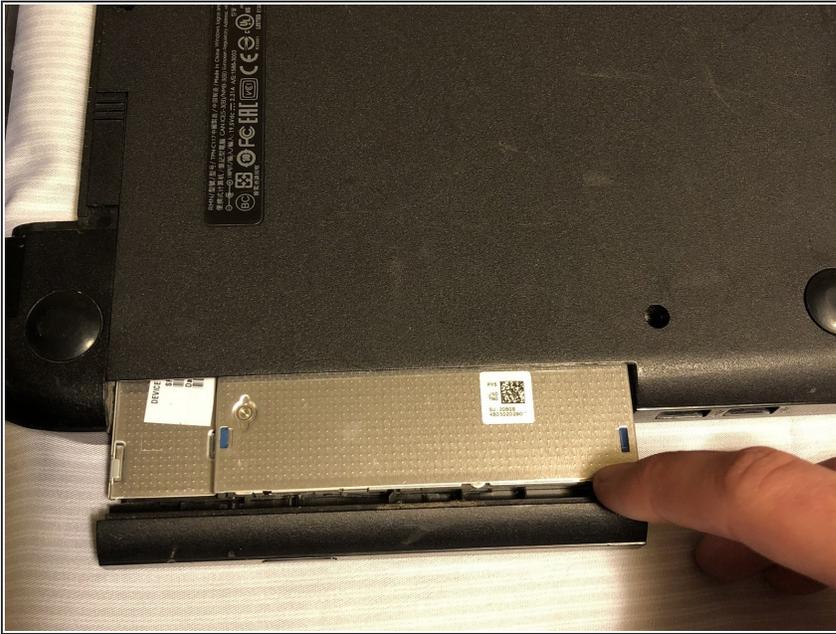

## Step 2 — Optical Drive

- Using a Phillips #1 screwdriver, remove the small screw next to the disc engraving shown in the picture.

This document was generated on 2020-11-28 06:40:13 AM (MST).

### Step 3

- Gently slide the optical drive out of the side of the computer.

### Step 4 — HP 15-R263DX Disassembly

- Locate the two corner grips on the hinge side of the computer.
- Using a metal spudger, remove the two corner grips to reveal the screws.

## Step 5

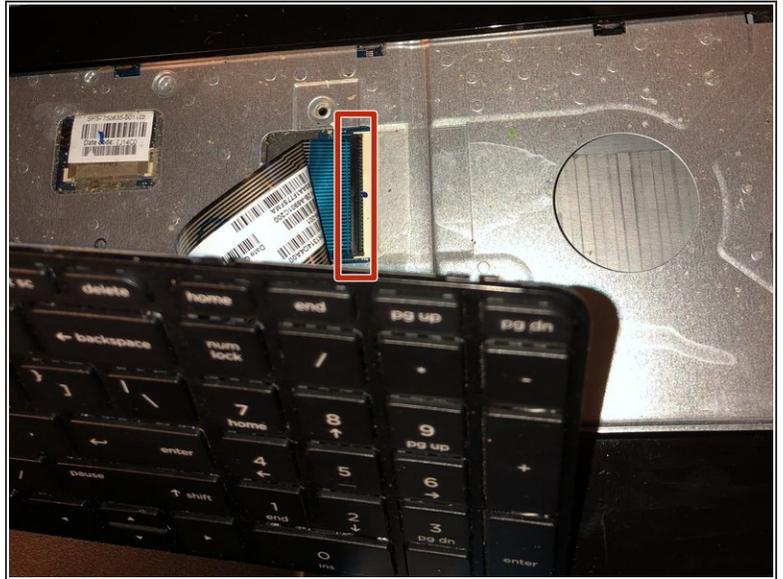

- Remove the 11 small screws on the bottom of the computer that are shown in the picture.

## Step 6

- Remove the 2 small screws that are on the bottom side of the disc tray slot.
- ⓘ These screws are shorter and wider than the others.

## Step 7

**⚠** Once the keyboard is loose, do not immediately pull away from computer. It is attached by the ribbon connector.

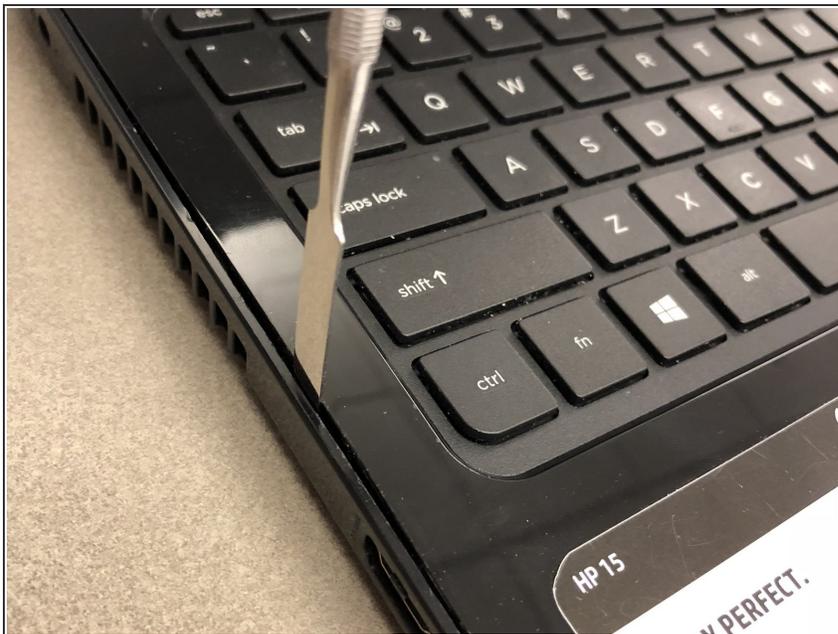

- Using a spudger, pry around the edges of the keyboard until all clips are disengaged and the keyboard is loose from the computer.
- To disconnect the ribbon connector, flip up the black clip shown in the picture.
- Gently pull the ribbon until disconnected.

## Step 8

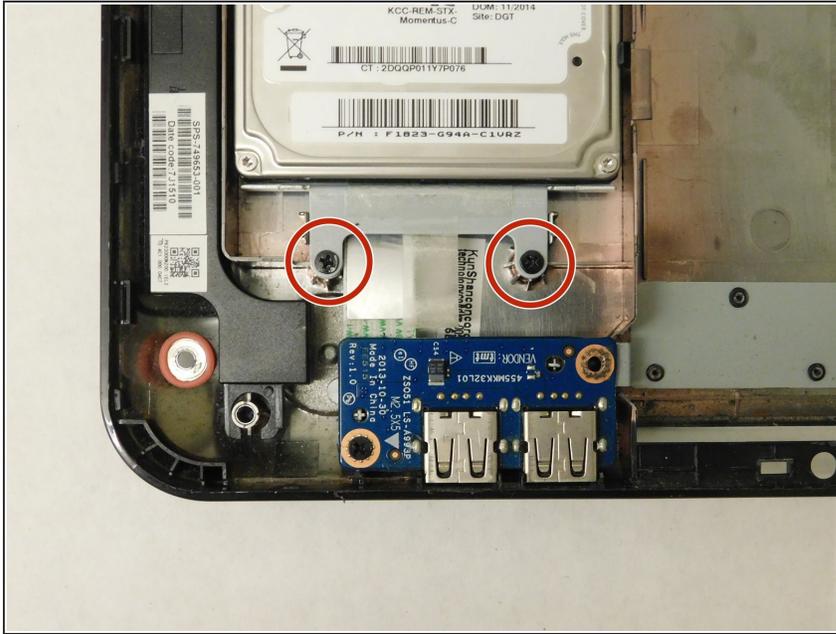

- Disconnect the other two ribbon connectors underneath the keyboard by flipping up the black clips.
- Remove the 4 small screws shown in the picture.

## Step 9

- Disengage the face plate clips by prying the case away from around the outer edge of the face plate with a metal wedge.
- The face plate can then be lifted away from the computer.

## Step 10 — Hard Drive

- Remove the 2 black screws holding the hard drive to the computer frame.

## Step 11

- Gently slide the hard drive away from the motherboard to disconnect it.
- After it's disconnected, lift the hard drive up to remove it from the computer.

To reassemble your device, follow these instructions in reverse order.
