INTRODUCTION

This guide should be used if a key is loose on the keyboard or a key isn't working as intended.

The process should not require any tools, but a plastic opening tool may make it a little easier.
🔧 TOOLS:

- iFixit Opening Tools (1)

　　　www.iFixit.com

Step 1 — Key

- Open laptop in the front facing position.

- Use a plastic opening tool to remove the desired key from the keyboard.

⚠ When lifting up on the key, do so carefully as to not break the key or its housing underneath.

Step 2

- Use a finger to push a new key into place.

If the key does not feel like it feels to be in the correct position, retry the process following the steps in order again.
