

# HP ProBook 4530s WiFi Card Replacement

This will teach you the easiest way I found to...

Written By: Drew Canada

# INTRODUCTION

This will teach you the easiest way I found to remove and replace the WiFi NIC in the ProBook 4530s.

## TOOLS:

Spudger (1)

Phillips #0 Screwdriver (1)

## Step 1 — Introduction

- Start by flipping over the laptop onto its back.

## Step 2 — Battery Removal

- Push both switches inward. The battery should pop out a slight amount.
- Pull out the battery.

## Step 3 — Back Panel Removal

- Press on both of the battery switches then push on the back panel forward.
- It should pop out slightly.
- Lift and slide the panel off.

## Step 4 — Connector Removal

- Locate the WiFi card outlined in red.
  - The golden connectors will need to be popped off. They are marked in blue.
- ⚠ Be very careful. If these connectors break, you will have to buy entirely new wires and connectors.**
- Use a nail, a flat-head screwdriver, anything that will be able to pop off the connector gently.

## Step 5 — Card Removal

- Remove the two screws that secure the card down.
- The card should pop up at a 45 degree angle.
- Pull the card straight out.

To reassemble your device, follow these instructions in reverse order.
