## Step 1 — Back Panel

 Turn off the device before starting

 To prevent damage, open the device on the side without the buttons.

- Insert the hooked end of the plastic opening tool in the gap between the screen and the back panel on the edge of the device.
- Slide the plastic opening tool down the long side of the device.
- Insert tool again and slide it down the long side of the case a second time.

## Step 2

- Pull the back panel away from the screen.

### Step 3 — Motherboard

- Remove the black tape to reveal the screen connector.

### Step 4

- Flip up the retaining tab using the plastic opening tool.
- Pull out the screen wire ribbon to disconnect the screen and motherboard.

## Step 5

- Using a PH 00 screwdriver, remove the four 4.5 mm screws that are holding the motherboard in place.

## Step 6

- It is now safe to remove and replace the old motherboard with your new motherboard.
- ☑ Close the black ribbon retaining tabs once ribbons are inserted during reassembly.

## Step 7 — Touch Screen

- Insert the hook side of the opening tool between the case and display.
- Press down on the tool until the screen is clear of the white retaining tabs.
- Use the plastic opening tool to gently pry up the screen.
- ⓘ This is best done on the corner closest to the wire ribbon.
- Continue prying around the screen until the screen pops out.

## Step 8

- After the screen has come loose, remove it from the device.
- ☑ When reassembling, make sure the screen locks in place, this may require extra pressure
- ☑ Close the black ribbon retaining tabs once ribbons are inserted during reassembly.

To reassemble your device, follow these instructions in reverse order.
