INTRODUCTION

You will need to have completed the prerequisite guides prior to this guide in order to execute it.

TOOLS:

- [Phillips #1 Screwdriver](#) (1)
 - [Flathead 3/32" or 2.5 mm Screwdriver](#) (1)
 - [TA20 Screwdriver](#) (1)
-

Step 1 — Blender Base

- i** Before disassembling the blender base, make sure the blender disconnected from any power outlet.
- Lift the jar straight up from the base without tilting the jar.

Step 2

- Remove the top three 1/4 inch base screws using a Philip's head screwdriver.

Step 3

- Remove the two base leg covers next to the power cord using pliers or a flat-head screwdriver.

i This provides access to the base screws beneath.

Step 4

- Remove the following screws that secure the top and bottom halves of the base.
 - One 1/4 Phillips screw
 - One TA-20 screw

i Both screwdrivers must have a minimum of a three inch shank (length).

i Screwdrivers with extenders will not fit down the access holes.

Step 5

- Lift the top half of the base from the bottom half of the base to reveal the internal mechanism.

Step 6 — Circuit Board

- Once you have the base removed, the circuit board should be clearly visible inside.

Step 7

- Remove the four screws located on the circuit board.
 - Two are on the left side.
 - Two are on the right side.

Step 8

- Remove the following soldered connections with a soldering iron:
 - Motor wires
 - Power cord wires

Step 9

- Lift the circuit board straight up to remove it from the base.

Step 10 — Buttons

- Once the circuit board has been freed from its screws it can be moved out of the way to gain access to the buttons.
- A single screw must be removed from the top as shown.

Step 11

- Push firmly from the outside of the blender on the face of the buttons to pop it out of its locked position.

Step 12

- Provided is a front and a back view of a functioning button frame from the BL3000S.

 Check for cracks, bends, debris, or missing extensions and fastens.

To reassemble your device, follow these instructions in reverse order.
