# INTRODUCTION

Before the majority of components can be accessed to be replaced, the back panel will need to come off.
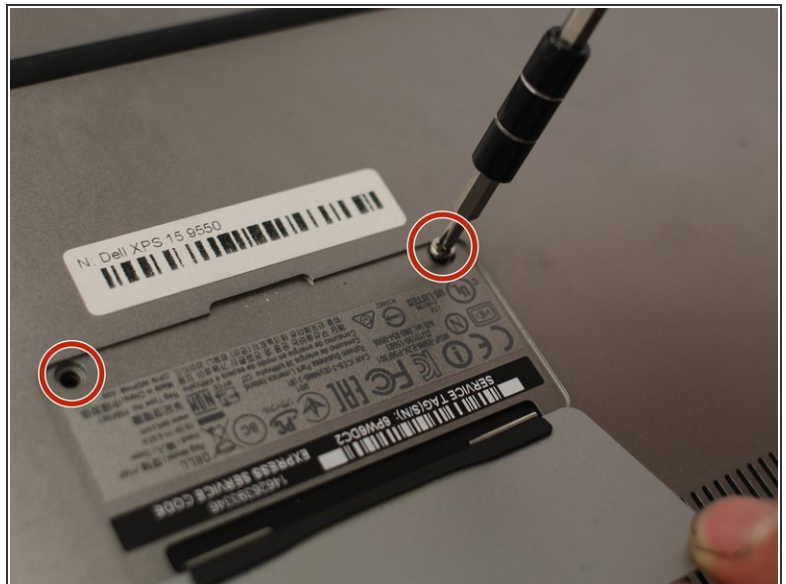

## 🔧 TOOLS:

- T5 Torx Screwdriver (1)
- Phillips #00 Screwdriver (1)

## Step 1 — Back/Underside Panel

- Turn the laptop upside down.

⚠ Make sure the laptop is turned off.

- Use a T5 Torx Screwdriver to remove the ten 3 mm long screws from the perimeter of the back of the laptop.

## Step 2

- Open up the information panel door (on the middle of the back side).

- While holding the door open, use a Phillips #00 Screwdriver to remove the two 10 mm long screws.

This document was generated on 2022-07-10 12:06:24 AM (MST).

## Step 3

- Carefully lift the 2 corners of the back panel close to the hinge upwards, to release the whole panel.

⚠️ Do not force the panel off. If it does not come off easily, try to use a plastic spudger where it is stuck.

To reassemble your device, follow these instructions in reverse order.
