---

# INTRODUCTION

The screws could be torx or Philips head in the body and where the neck bolts to the body.

---

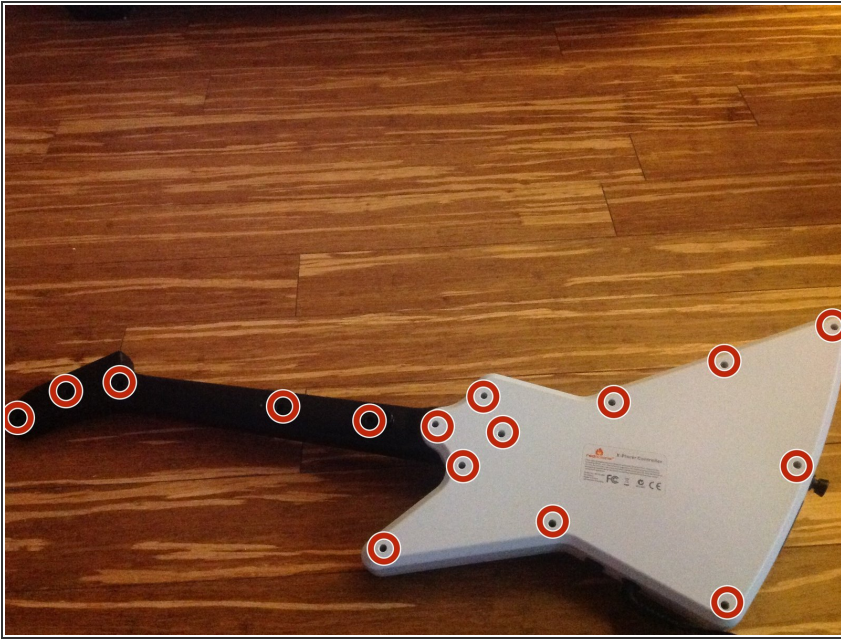

## TOOLS:

- [T10 Torx Screwdriver](#) (1)
  - [Phillips #1 Screwdriver](#) (1)
-

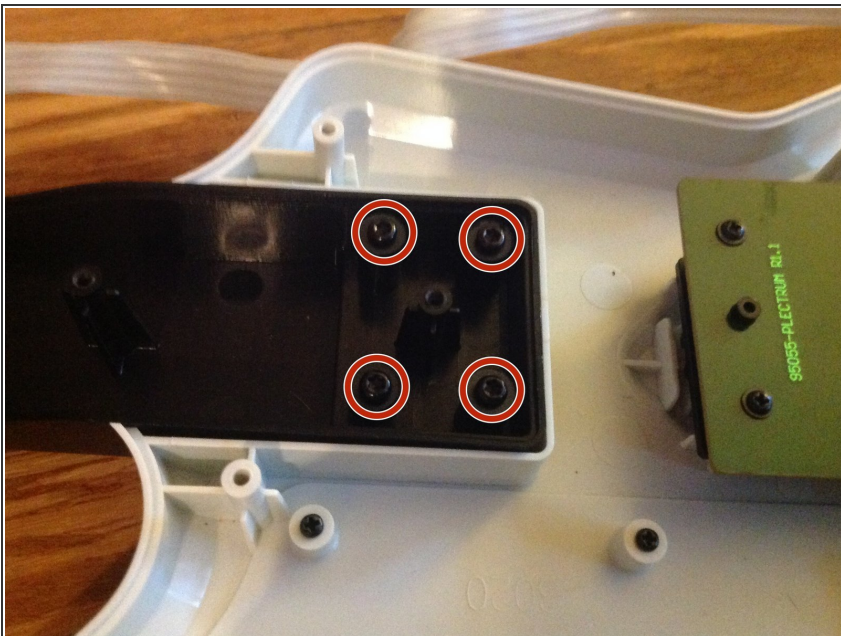

## Step 1 — Case

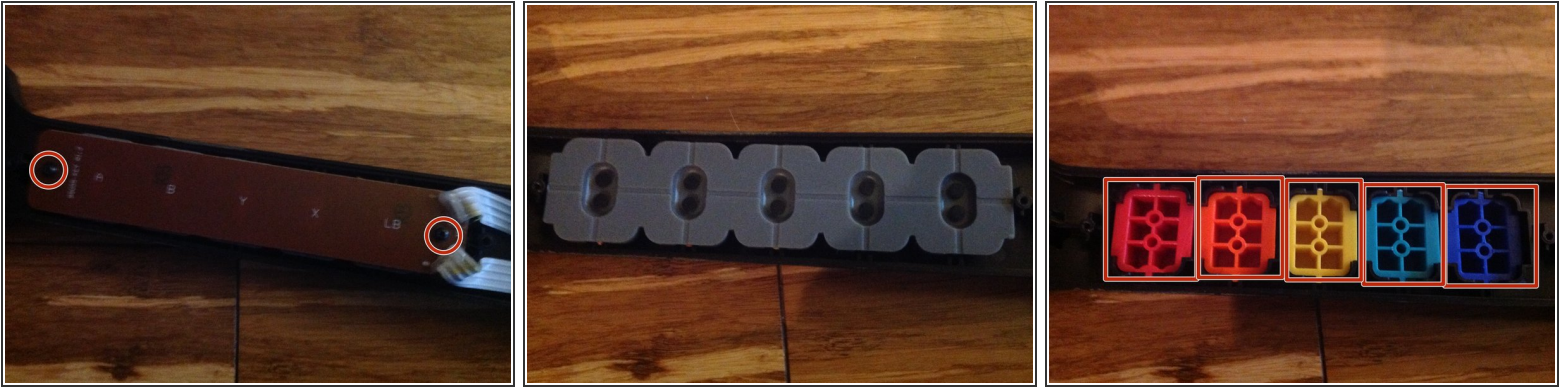

- Remove all 16 #10-torx screws from the back side of the case.
- Gently separate the case pieces.
- ⓘ A strong magnet helps greatly when taking out the screws.
- ⚠ Keep in mind when reassembling, the case is plastic so, don't tighten the screws too tight.

## Step 2 — Neck

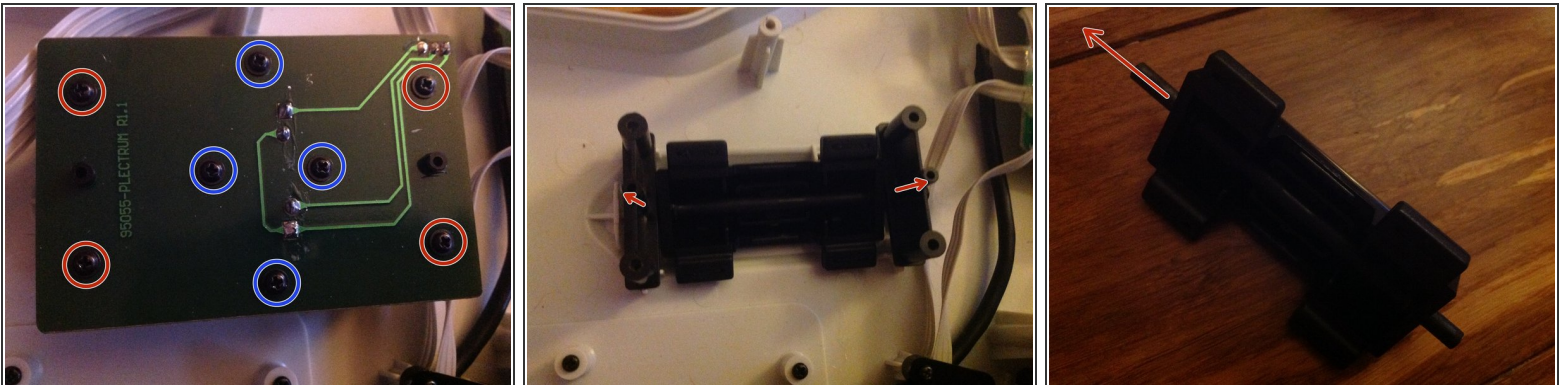

- Unscrew the 4 #10-torx screws.

### Step 3 — Colored Keys

- Unscrew the 2 Philips head screws
- Peel off the pads.
- Push the colored keys out from the other side.

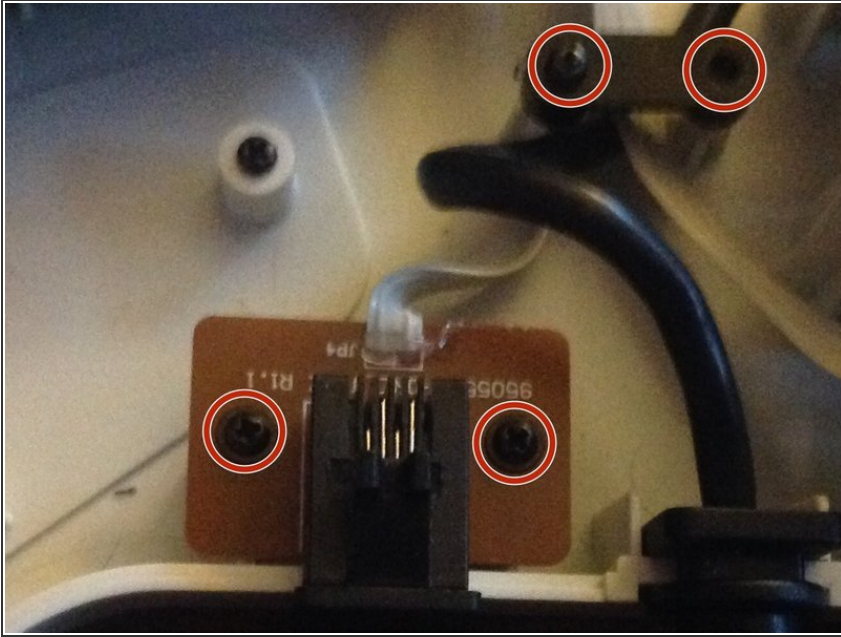

### Step 4 — Strum Bar

- Unscrew the red screws and pull the board out.
- Then, unscrew the blue screws
- Pull the bracket things off.
- Pull out the pin.

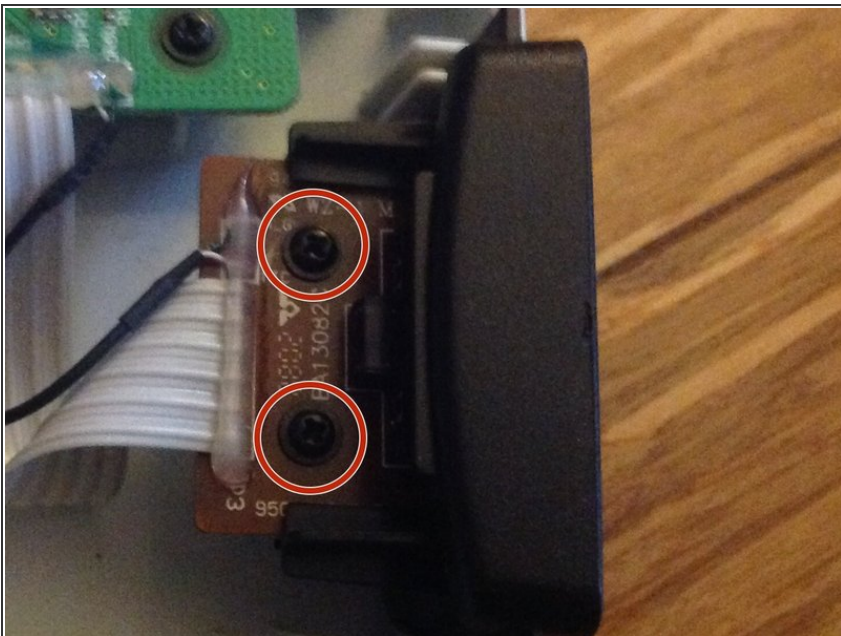

## Step 5 — Unused port

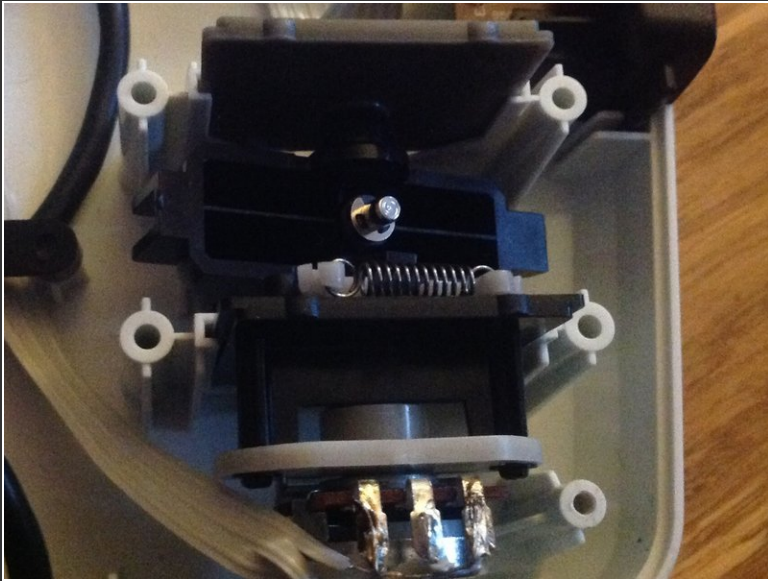

- Unscrew the 4 Philips head screws.

## Step 6 — Aux Port

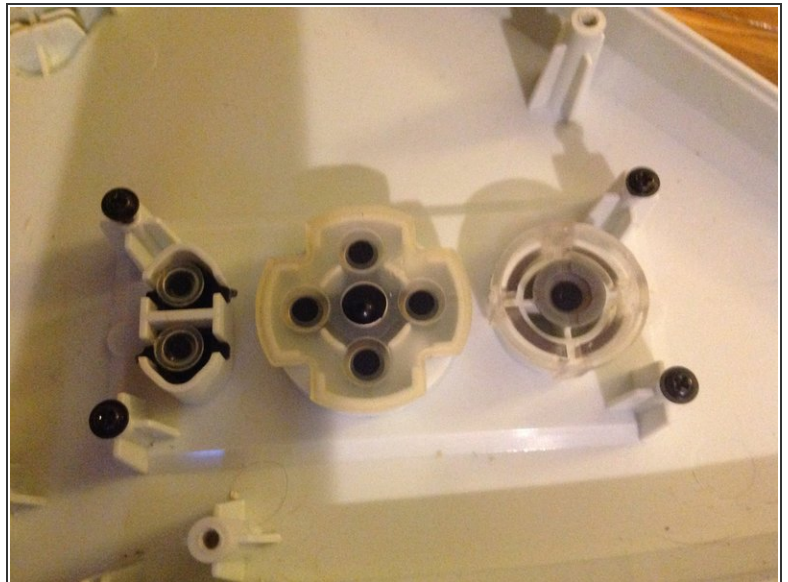

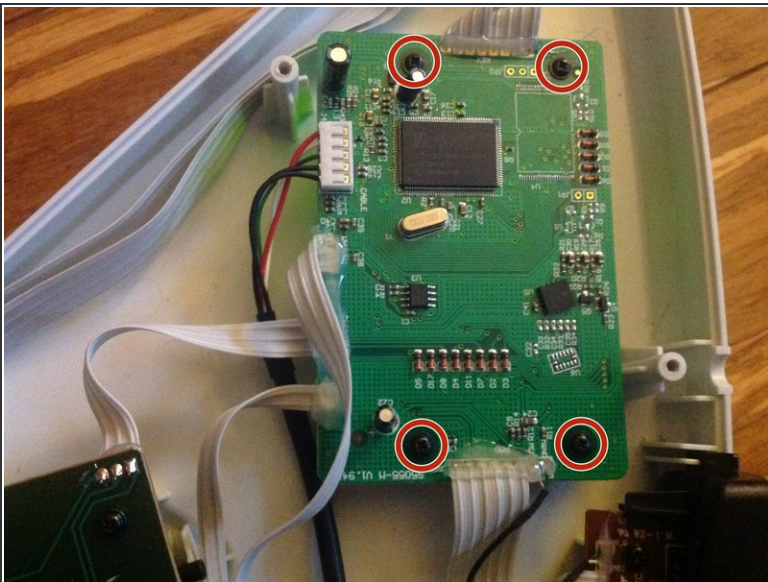

- Unscrew these 2 Philips head screws.

## Step 7 — Whammy Bar

- Push from the other side until it comes out.
- Take the spring off with the connector

## Step 8 — Motherboard

- Unscrew the 4 Philips head screws.
- Peel off the contact pads.
