

# 2005 Nissan Altima Windshield Wiper Replacement

How to replace windshield wipers on a 2005 Nissan Altima.

Written By: Renina Erdner

## INTRODUCTION

If your windshield wipers are old, rusty, or simply not doing their job, use this guide to replace the wiper blades (also known as windshield wipers).

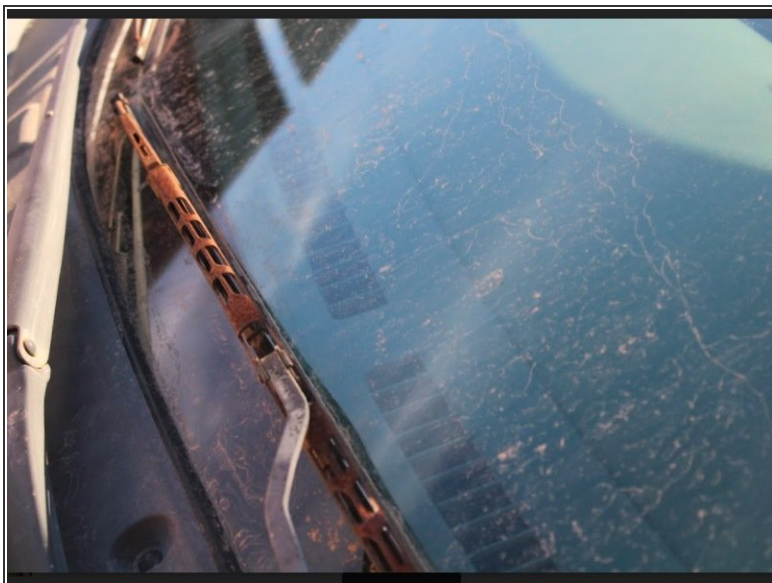

In this guide, I will demonstrate how to replace windshield wipers on a 2005 Nissan Altima. This guide will list out the steps required to complete the replacement.

The wiper blade replacement is necessary when your windshield wipers simply are not doing their job. If they are rusty, dirty, old, or leaving smudges, you have found the guide to help you out.

While you are working on this project, be sure to handle the wiper blades carefully. Dropping them on the windshield may cause cracks and other damages to the windshield of the car.

Once you are done with the wiper blade replacement, you will have clean, rust-free windshield wipers to effectively clean your windshield.

## Step 1 — Windshield Wiper

- Carefully lift the wiper blade off the windshield of the car.

## Step 2

- Push the small tab on a piece that connects the old wiper blade to the wiper arm (connecting to the car).
- While pushing the tab, invert the wiper blade horizontally.
- Lift the wiper blade off the hook of the wiper arm.

## Step 3

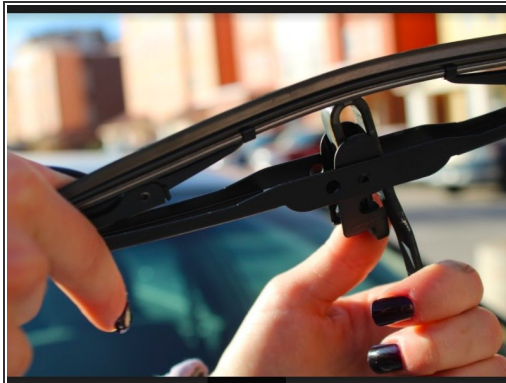

- Invert the new wiper blade horizontally.
- Place the wiper arm hook in the slot of the new wiper blade.

## Step 4

- Hook the wiper arm hook onto the tab of the wiper blade.
- Invert the blade vertically and place on the windshield.

## Step 5

- Repeat the same steps on the other windshield wiper blade and wiper arm.

## Step 6

- Dispose of the old wiper blades.
