INTRODUCTION

This guide will help you replace Toshiba Satellite A105-S4284 RAM. RAM allows memory to be accessed directly in a random order. You might need to replace a RAM if your computer shuts down abruptly, your computer performance is low quality, or the computer fails to install new programs.
TOOLS:
- Phillips #1 Screwdriver (1)

PARTS:
- PC2-5300 2 GB RAM Chip (1)

Step 1 — Battery

⚠️ Make sure your computer is turned off and the computer is not plugged in.

● Turn your laptop upside down, and slide the right release tab outward.

● Using you left hand, hold the left release tab towards the left side and then pull the battery out.

Step 2 — RAM

- Loosen the screw located on the cover of the RAM using Phillips #1 screwdriver.

- ⓘ You will not be able to remove the screw from the panel as it is designed to stay in the panel.

Step 3

- With your fingers, carefully remove the middle panel by lifting the edge with the indent.

Step 4

- Using your fingers, release the tabs on both ends of the RAM.

- Pull the RAM out.

- (i) The other RAM is released in the same manner.

To reassemble your device, follow these instructions in reverse order.
