

DJI Mini 2 Propeller Blades Replacement

This guide will help you replace the propeller blades on the DJI Mini 2.

Written By: Jacob Matos

INTRODUCTION

This is a replacement guide for the DJI Mini 2's propeller blades.

The propellers are on the DJI Mini 2 help the drone generate lift for the drone when it is flying. A drone propeller will need to be [replaced](#) if the propeller is damaged and causes the drone to hover in an inconsistent way.

TOOLS:

- [Mako Driver Kit - 64 Precision Bits](#) (1)
-

Step 1 — Propeller Blades

- Open up the propeller arms to make it easier to access the propeller blades.
- Then, place the drone on a flat surface.
- ❗ There should be stickers on the device telling you how to unfold the propeller arms.

Step 2

- Remove the 7mm J000 head screw attaching the blade to the motor.
- ❗ Some pressure may be needed to successfully unscrew the screw.
- Remove the propeller blades.

To reassemble your device, follow these instructions in reverse order.
