INTRODUCTION

This guide is for battery's replacement. The guide follows a step-by-step sequence to take out the back panel, unplug cables and replace the batter. The battery type is 6760mAh Li-polymer with 10 hours battery life.
🔧 **TOOLS:**

iFixit Opening Tool (1)
Tweezers (1)
Phillips #00 Screwdriver (1)

Step 1 — Battery

⚠️ Make sure that the device is turned off as a precaution.
- Unplug the charger and remove any memory card you may have in the device.

- Wedge the plastic opening tool between the front and back cover on every side.

- Slide the plastic opening tool back and forth to make sure that the back cover is disconnected.

- Once disconnected, remove the back cover from the device screen.

Step 2

- Remove the protective copper sticker and all tape fixed on the device.

- Using [tweezers](#), remove the ribbon cable from their connections attached to the motherboard.

  ⚠ While using the tweezers, make sure to use minimum force and precision to avoid damaging any components.

Step 3

- Remove the four 2 mm Phillips #00 screws holding the battery tray in place.

Step 4

- Locate the battery cable attached to the motherboard. Using the same technique used on the ribbons, do the same with the battery.

- Remove the battery from the device. Once removed, use the plastic tool to separate the metal frame from the battery.

- ⓘ When separating the metal frame, be sure to hold on in the center as the battery is two separate cells.

To reassemble your device, follow these instructions in reverse order.
