---

## INTRODUCTION

Shows how to replace motherboard with pictures and words. Removal of motherboard requires opening the camera and unscrewing screws from motherboard to remove from rear case.

---

### TOOLS:

- [1.5mm Hex Screwdriver](#) (1)
  - [Phillips #00 Screwdriver](#) (1)
  - [iFixit Opening Tool](#) (1)
-

## Step 1 — Disassembling Samsung HMX-W300

- To remove the wristband of the device, grab the middle loop and pull the band through.

## Step 2

- Remove four screws with a Hex 1.5 mm screwdriver.

### Step 3

- Open the HDMI door on the side of the camera.
- Remove the single screw using a Phillips #00 screwdriver.

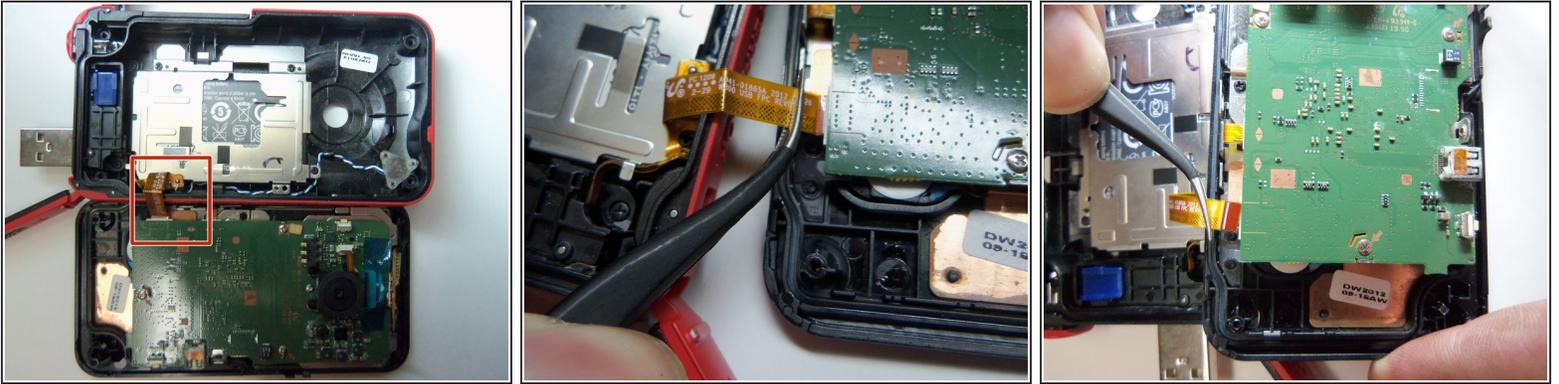

### Step 4

- Use the iFixit opening tool on both sides on the device. Pry apart both sections with light force.

**⚠ Do not apply too much force. There is a wire that attaches the front case with the rear case that can be damaged.**

## Step 5

- Pull the wire ribbon out with a pair of tweezers.

## Step 6 — Remove tape.

- Use tweezers to remove the tape.

## Step 7 — Unplug wire ribbon.

- Use tweezers to grab the wire ribbon, then pull the wire out of connection.

## Step 8 — Remove screws.

- There are 5 Phillips size 00 screws. Remove all 5 screws.
- Wire ribbon is attached to the motherboard.

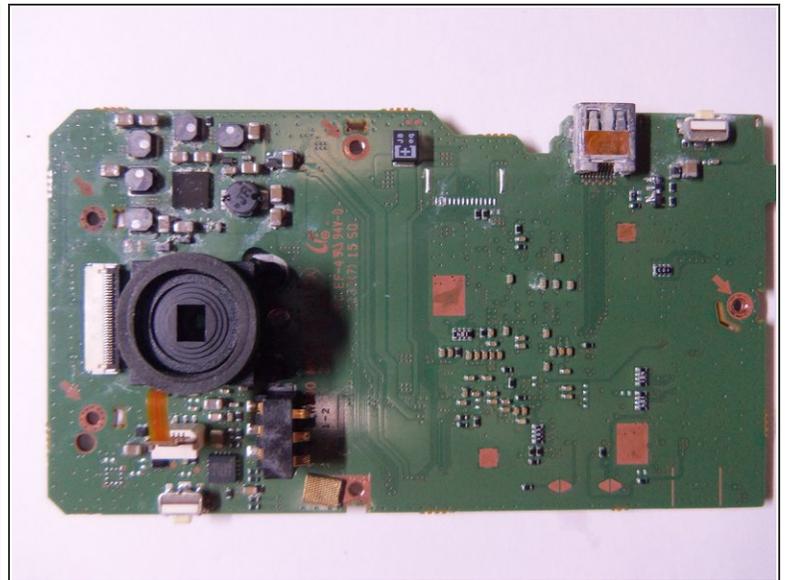

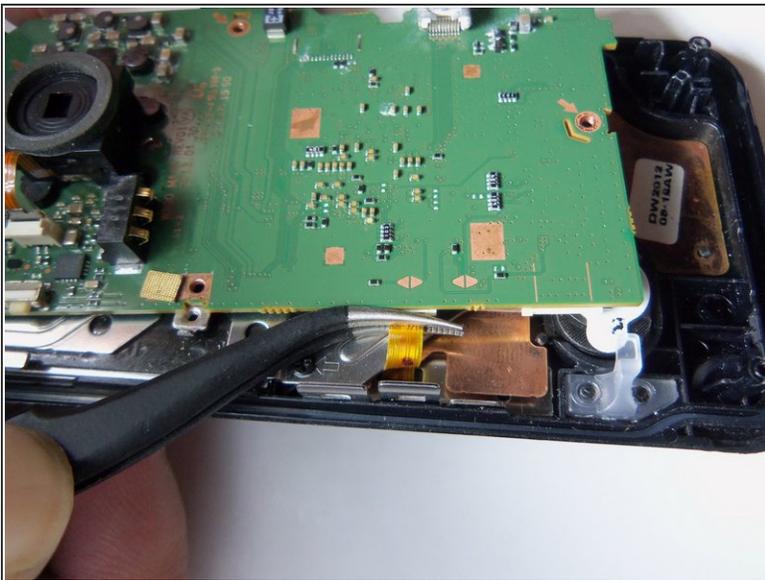

## Step 9

- Pry the motherboard up using the plastic opening tool.

**⚠ Be careful there is a wire ribbon holding the motherboard.**

## Step 10 — Disconnect wire ribbon.

- Use tweezers to disconnect the wire as shown. This will loosen the motherboard from the rear case.

To reassemble your device, follow these instructions in reverse order.
