---

## INTRODUCTION

After years of service your battery may be weak or no longer hold a charge. This guide replaces your battery with a new one.

---

### TOOLS:

- [Spudger](#) (1)
  - [Soldering Iron](#) (1)
  - [Phillips #00 Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
-

## Step 1 — Rear Case

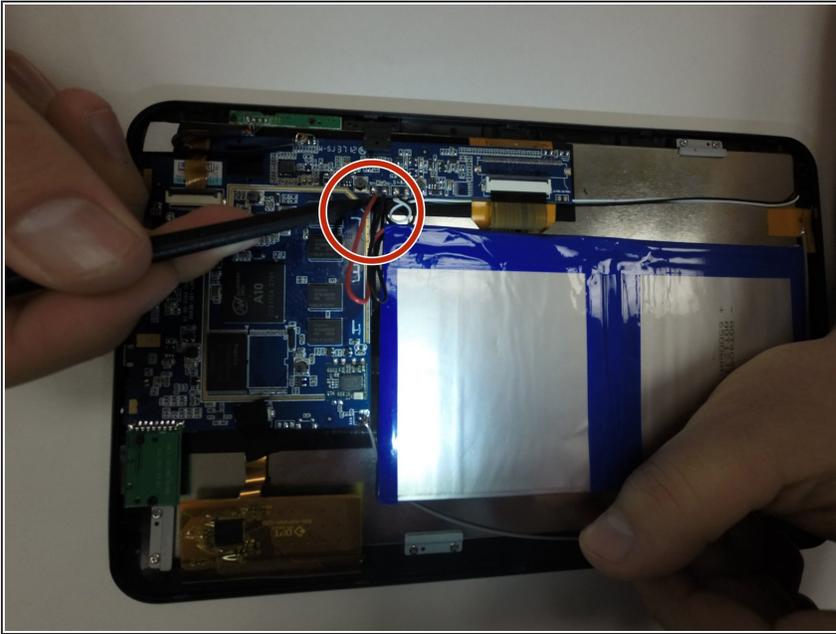

- Remove the two 3mm screws using a PH00 screwdriver.

## Step 2

- Use the blue plastic opening tool to gently pry the back case off.

### Step 3 — Battery

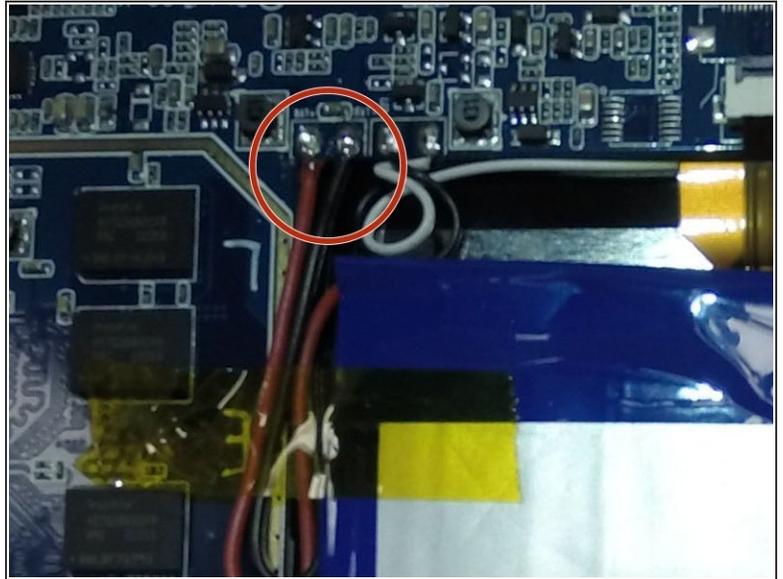

- Disconnect the wires that connect the battery to the motherboard using the spudger.

### Step 4

- Slide the spudger underneath the battery and gently lift it off of the adhesive.

## Step 5

- Place the new battery in the same location and connect the wires the same way as the previous battery.

To reassemble your device, follow these instructions in reverse order.
