Lenovo ThinkPad T420s Keyboard Replacement

If you are experiencing sticky, unresponsive...

Written By: Alex Cabrera

INTRODUCTION

If you are experiencing sticky, unresponsive keys, you may need a new keyboard. This guide shows you how to replace your laptop's keyboard.
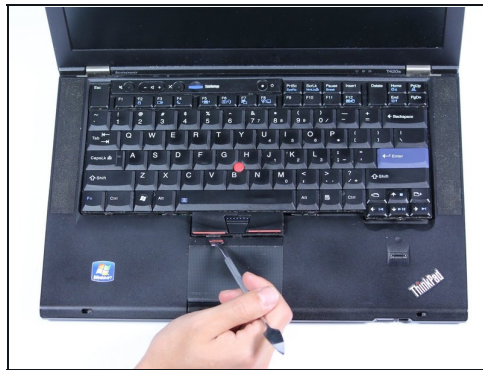

Step 1 — Keyboard

- Flip your laptop over so the bottom is facing up.

- Remove the memory panel by removing two black 5mm screws using the Phillips #0.
- Remove the memory panel.

Step 2

- Remove the two 5mm screw using the Phillips #0 screwdriver.

- Flip the laptop back over and open it.

Step 3

- Gently push down on the keyboard and slide it towards the screen. This will pop the bottom of the keyboard out of the casing.

- (i) The best place to push is on the frame of the keyboard by the power button.

- Using the metal spudger, lift and slide out the keyboard.

⚠ When lifting the keyboard do not remove it completely because a cable will still be connected to the laptop.

Step 4

- Remove the orange cable by lifting up on the tab on the end of the ribbon connection.

To reassemble your device, follow these instructions in reverse order.
